

Auditing HEDIS Data Submitted via the Provider Portal

HAP audits the HEDIS data submitted on the provider portal. This audit confirms that the data submitted via the provider portal matches the corresponding medical record. Until the audit is done, the HbA1c HEDIS gap will not show as closed on the portal or any other HEDIS and Best Practice Reporting.

The outcome of the audit will determine if the data submitted can be used. These results could impact your HEDIS rates for your Best Practice Program. You can avoid your HEDIS data potentially being excluded from the HEDIS rate by submitting it to HAP through claims. Please review the *HEDIS Reference Guide* for the various HEDIS measures and HEDIS compliant codes that should be billed to close the gap. To find the guide:

- Log in at **hap.org**
- Select *HCC and HEDIS Training Material* under *Quick Links*

Reminder! Providers can submit data for the following HEDIS measures:

- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening
- Diabetes – Blood Pressure Control
- Diabetes – Blood Sugar $\leq 9\%$
- Diabetes Care – Retinal Eye Exam
- Influenza Vaccine
