

## **Biosimilar to Humira Added To HAP Formulary**

August 1, 2023

Effective immediately, we added Hadlima (adalimumab-bwvd) to the HAP formulary. Biosimilar agents, such as Hadlima, have an important role in lowering prescription drug costs for patients.

Here's what you need to know about Hadlima.

- It's available in citrate free high and low concentration products.
- It's approved for the same adult indications as Humira.
- It does not require prior authorization.
- It's available at zero copay (deductible will apply).
- It will be available at our specialty pharmacy – Pharmacy Advantage.

In the future, Humira will be removed from the HAP formulary.
