

# Protect 30 patients in 30 minutes

You can quickly help your patients with A1C over 8% lower their blood sugars and reduce their risk of COVID-19 related complications.

Our unique d-Nav<sup>®</sup> Insulin Management Program combines an FDA cleared mobile app with patented technology, artificial intelligence and virtual clinical support to automate insulin titration based on each patient's individual needs. Access is easy, through a user-friendly app on a handheld device. The d-Nav technology guides patients to optimize insulin doses at home based on their changing glucose levels.

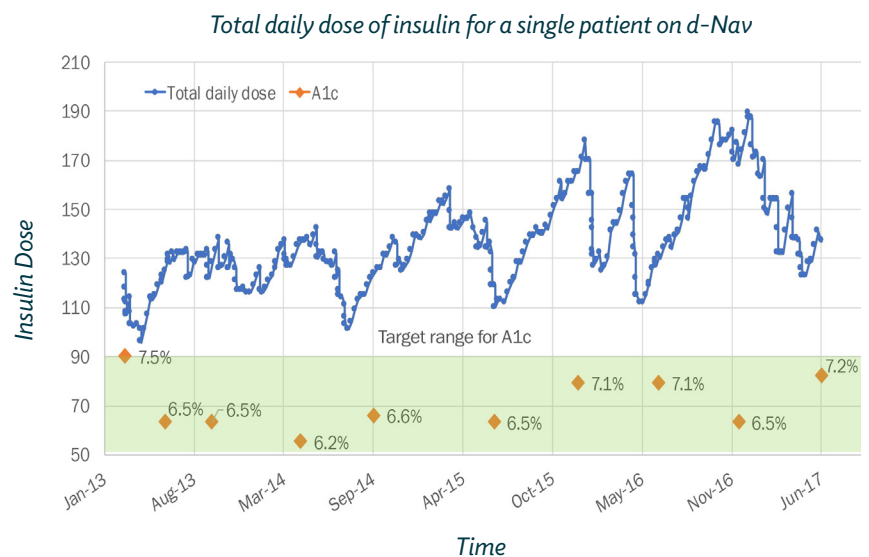

## Putting your patients on the d-Nav program is easy for you and easy for your patients:

- 1 Identify your patients who are using insulin, yet have an A1C greater than 8%
- 2 Send a referral for each patient to Hygieia using the form on the back of this flyer
- 3 Our clinical team will work with your patient for a virtual set-up and ongoing support and give you regular progress updates

The d-Nav program and all the necessary testing supplies are covered by most commercial insurance carriers, as well as Medicare and Medicaid.

Your patient's ever changing sugar levels need to be addressed by frequent insulin adjustments.

Optimizing the use of insulin through automation can quickly improve A1C levels and protect patients from COVID-19 complications.
